

KAS, Inc. provides comprehensive Environmental Site Assessments services to individuals, financial institutions, insurance companies, municipalities, and private developers. KAS's experienced site inspectors are expert at identifying and defining environmental issues, assessing potential liabilities and options and explaining them in understandable terms.

Phase I Environmental Site Assessments to ASTM E 1527-05

KAS's staff of scientists, geologists, and engineers are experienced in conducting Phase I Environmental Site Assessments and identifying Recognized Environmental Conditions (RECs). KAS provides recommendations to address both historic and current RECs which may present future liability to prospective buyers and sellers.

Phase II Environmental Site Assessments to ASTM E 1903

KAS performs Phase II Environmental Site Assessments on contaminated or potentially contaminated sites. KAS prepares a work scope that is tailored to individual site needs and RECs. The Phase II Environmental Site Assessment identifies if significant contamination is present on a property and presents recommendations for future work.

Remediation Planning and Construction

KAS has experienced engineers who provide design and permitting services for remedial solutions to identified contamination. KAS identifies whether State and/or Federal grant and loan program assistance may be available for site cleanup while working closely with architects, designers, and contractors to provide the best cleanup possible for a site.
